The new Generation!

Friedrich August Picard GmbH & Co. KG

Heinrich-Schicht-Str. 7 • D-42499 Hückeswagen

ASSEMBLY

With the SNAP system, the base carrier is mounted on the power belt and only the grinding block fitted with the desired facing needs to be changed.

Simple release with the aid of the SNAP KEY and clicking (snapping) the new grinding block back into place is done within seconds.

GRINDING BLOCK FAPI-EVO SNAP -

in terms of set-up time, the two-piece offers an unbeatable advantage over his predecessor!

As with the FAPI-EVO grinding block, the facing type can be specially adapted to the material to be processed. In addition to the abrasive fleece/abrasive cloth combination, we also produce our **EVO** and **EVO SNAP** grinding blocks as a SOLID version. The facing consists exclusively of abrasive cloth.

*Depending on the machine type, the base carriers are available with or without wings!

ADVANTAGES

Quick and easy handling by simply loosening the grinding blocks with the SNAP KEY!

Inserting the new blocks on the base carriers without tools!

No time-consuming removal of the powerbelt from the machine any more!
